Group: 5

Step 1) Install the libraries pipwin, pyaudio, SpeechRecognition, and nltk.

Step 2) Run the SpeechToText.ipynb file.

Step 3) Run Project. ipynb file.

Step 4) Currently for the output prediction it is taking the random record from the test dataset partition if we want to apply a new medical prescription set it in the example_sentence variable value.

Step 5) Make a prediction using one of the models.
